## Regular Expressions: single characters

| Char | Meaning | Example | matches | non-matches |
| :---: | :---: | :---: | :---: | :---: |
| - | Any one character except newline | h.t | hat hst | ht |
| most chars | Match itself (use $\backslash$ to suppress any special regexp meaning) | $\backslash($ | ( | y |
| $\backslash d$ and \D | digit and non-digit, resp. | $\backslash d \backslash d \backslash D$ | 101 | Iol |
| \w and \W | word char or non-word char, resp.: letter, digit, underscore | $\backslash w \backslash W \backslash w$ | $\begin{aligned} & \text { a\&7 } \\ & -- \end{aligned}$ | -\&a |
| $\backslash s$ and \S | any (non)whitespace, resp. | alsb | $\begin{array}{ll} a & b \\ a b & \end{array}$ | $\begin{aligned} & a X Y Z b \quad a b \\ & a X Y Z \quad b \end{aligned}$ |
| $\wedge$ and \$ | Start and end of input, resp. | $\wedge$ h.t\$ | hat hst | zhatz huts |
| [...] | Any one character in the range | [ $\mathrm{A}-\mathrm{Fw}-\mathrm{z}$ ] | $\begin{aligned} & C \\ & z \end{aligned}$ | $\begin{aligned} & \mathrm{BCD} \\ & \mathrm{Bz} \end{aligned}$ |
| [^...] | Any one character not in the range | [^A-Fw-z] | G | $\begin{aligned} & \text { C } \\ & \text { z } \end{aligned}$ |

More (including POSIX char classes) on the web.

## Regular Expressions: combinations

| regexp | Meaning | Example | matches | non-matches |
| :---: | :---: | :---: | :---: | :---: |
| $\alpha^{*}$ | 0 or more of preceding regex $\alpha$ | a*b | $\begin{aligned} & \text { aaab } \\ & \text { b } \end{aligned}$ | abb |
| $\alpha+$ | 1 or more of preceding regex $\alpha$ | $a+b$ | aaab ab | $\begin{aligned} & \mathrm{abb} \\ & \mathrm{~b} \end{aligned}$ |
| $\alpha$ ? | 0 or 1 of the preceding regex $\alpha$ | $a b$ ? $c$ | abc ac | abbc c |
| $\alpha\{m, n\}$ | $m$ to $n$ of preceding regex $\alpha$ If one number is omitted (but comma there), default values are $0,+$ inf. 0 | $a\{3,5\} b$ | aaab <br> aaaab <br> aaaaab | aaaaaab <br> abab <br> aab |
| (...) | Precedence: Group as a single regex | $a(b c) * d$ | ad abcbcd | abccd |
| $\alpha \beta$ | Concatenation: a match for $\alpha$ followed by a match for $\beta$. | (all the above!) |  |  |
| $\alpha \mid \beta$ | OR: a match for $\alpha$ followed by a match for $\beta$. (N.B. Low precedence.) | a*b\|c*d | aaab cccd b | abd |

## Regular Expressions (Common)

| simplistic <br> e-mail address | $\backslash S+@ \backslash S+\backslash . \backslash S+$ | Check for an @ and a . and allow nonwhitespace <br> characters only. (allows "4@5.!" though.) |
| :--- | :--- | :--- |
| poor <br> password | $\backslash w+$ | Any sequence of word characters. <br> (Disallows puncuation!) |
| specific-length <br> password | $\backslash w\{4,10\}$ | Any sequence of word characters at least 4 characters <br> long but no more than 10 characters long |
| advanced <br> password | $[a-z A-Z] \backslash w\{3,9\}$ | A four to ten character password starting with a letter. |
| another adv. <br> password | $[a-z A-Z] \backslash w^{*} \backslash d+\backslash w^{*}$ | A password starting with a letter, containing only <br> letters/digits/underscores, with at least one digit. |
| limited-length <br> field | $\backslash S\{4,10\}$ | Any set of nonwhitespace characters at least 4 <br> characters long but no more than 10 characters long |
| SSN | $\backslash d\{3\}-\backslash d\{2\}-\backslash d\{4\}$ | Exactly three digits, followed by a dash, followed by <br> exactly two digits, followed by a dash, followed by <br> exactly four digits |

## Regular Expressions ( you try...)

| RU SID |  | Radford University Six digit ID number. The number <br> cannot start with a zero. |
| :--- | :--- | :--- |
| Phone number |  | Phone number in the form (999) 999-9999 <br> (how to have the space be optional?) |
| Phone number |  | Allow any of the three common formats: <br> 999-999-9999, or (999)999-9999, or just 999-9999 |
| URL | Universal Resource Locator that limits the protocol to <br> http or https and requires a host name. |  |
| Another Email <br> address | An email address that starts with a letter, has a length <br> of at least three word characters to the left of the @ <br> sign, has a domain name that starts with a letter and <br> has a length of at least three word characters, has the <br> requred. after the domain name and has a top level <br> domain of either two or three letters |  |

## Regular Expressions: some false starts

For URL: What is wrong with starting out:

- http|https:\w+...
- https*:...

For a phone number in any of three common forms:
What is wrong with starting out:

- <br>(? $\backslash d\{3\} \backslash)$ ? - (all enclosed in (...) ? to make it optional)

Telephone sol'n one, step-by-step:

- take the easy part: all three end in \d\{3\}-\d\{4\}
- that's optionally preceded by area code: (...)? $\backslash d\{3\}-\backslash d\{4\}$
- area codes are one of two forms: ((...)|(..))? $\backslash d\{3\}-\backslash d\{4\}$
- now just spec those two forms:

$$
((\backslash d\{3\}-) \mid(\backslash(\backslash d\{3\} \backslash) \text { ? })) ? \backslash d\{3\}-\backslash d\{4\}
$$

How does this solution compare to a brute force choice of three:

$$
(\ldots)|(\ldots)|(\ldots)
$$
